- Bubb was one of top teachers i have had at auburn. he truly wants students to do well and cares about their learning experience. VERY helpful outside of class and always available to meet!
- Professor Bubb is the most accommodating professor I have ever had. He teaches his difficult course material clearly and effectively and is always open to questions. Professor Bubb is the man!
- I didn't enjoy Stats because I had a hard time grasping the material. Our GTA and student assistant were VERY helpful, would not have passed without them!
- I would say that Robb was one of the best teachers I have had at Auburn. His teaching styles and grading were very fair, and gave opportunities to students to do well. He really wanted to see his students succeed, and to truly understand the information and knowledge he was teaching us. He was very approachable and gave us enough

resources to do as best we could. I learned a great amount of information in this class and would advise any student to take this class with him!

- Love this guy! Great teacher. Definety a keeper Auburn! Good job Mr. Bubb.

- Professor Bubb is an excellent stats professor. It's obvious he's very knowledgable about statistics, and he does well at conveying difficult concepts to his students."

Dr. Bubb is one of the best professors that I have had the pleasure of learning from at Auburn University. He is knowledgeable about the subject matter he is teaching and passionate about it, which makes the class fun and interesting. He is always available for help and if for some reason he is not he makes a full effort to find a way to accommodate each student the best he can. He genuinely wants every student to not only perform well in his class, but he especially wants each student to actually learn the material and understand the subject matter. He is an excellent professor and I am very thankful I was able to learn from him.

- This class it just really time consuming. I did like how the grading was set up, but I wish there were more opportunities to earn extra credit.

'Robb' was a GREAT teacher! He did anything and everything to help his students out, was patient and approachable. All of the additional work he does to help is students succeed is very helpful (especially the extra worksheets, review sheets, ect.).

- He wasn't afraid of being wrong or being corrected which was good.

--> Lab Write-Up may have been graded a little too strictly

--> Homework problems were not especially helpful. but worksheets and concepts sheets were VERY helpful

- I really think this class has been over complicated. It could be made to not be so hard. And the lab write up is nuts. It needs to go.

- Robb Bubb has been my favorite teacher here at Auburn so far! I really did enjoy having him as my stats teacher. He was very helpful & extremely nice! He's wonderful!"

- Everything was great!!! Since this was my first semester back in about three years I was glad to know I could make it. I remember the story he told in the beginning of the semester about the young man returning back school after not doing to good in the past year. The young man came back to school after a break and made all A's from there on out. I was in the same situation, but from that story I knew I still had a chance.

- nothing.

- This course was frustrating from beginning to end. The material and grading were hard. Trying to keep up was next to impossible and he was monotone.

Some of the assignments are extremely difficult to do a lone and understand what it is your actually doing. Stat lab was extremely hard to follow and over complicated. The lessons were taught way to fast and in a way no one could understand. The spss exam was fair and straight forward to study for and lab would be much more effective if it was specific and straight forward.

- The class was awesome! the way the class was taught is very organized and straight forward. I hate math and calculations and I was able to find confidence in myself and be motivated to learn the material because of the way it was presented and simplified. The grading scale is fair and the amount of assignments, tests, hw, study guides, etc. was extremely beneficial.

- Mr. Bubb was very reasonable. The way the course was set up was very well thought out and gave every student every opportunity to do well in the course. Extra credit was easily attainable if it was desired and there were many many hours of office hours if help was needed. The GTA and TA was also very helpful and always available to help when needed. Lab was a bit tedious because the computers were not very reliable but the GTA handled it the best she could. The final lab write up was extremely difficult because there was little initial direction but help was available throughout the week outside of class.

- Despite the terrifying rumors of how impossible this class was going to be, I found that the helpfulness and accessibility to Professor Bubb and the TAs are what really made my experience a great one. Although the material was hard and there was always an extra amount of effort needed, I surprisingly loved learning about this particular subject. The grades on tests, extra credit, and reports were always fair and given back in a timely manner. The extra help and explanations were always available and the resources available to us to help study were life savers. Overall, despite this being my hardest class of the semester it was also my favorite. I never would have thought I would be saying that, but there's something in the way that Professor Bubb teaches that really wants to make you strive to get a good grade and make him proud!

- None.

Math has always been a tough subject, but he was wonderful at explanation and help in lecture. No matter how "dumb" the question, he was always open to help. His assignment load was not too heavy and helped learning of the course material.

Great teacher, a little too in-depth in statistics in my opinion for undergraduate students who most likely won't use much of stats later! Very helpful, encouraging, and cares about students!

good teacher

I loved Rob and the way he taught and explained the material. The only thing about this class is that it is a GREAT deal of work. The lab was my biggest issue. The assignments that were expected to be done outside of lab on a program that you cannot have more than 2 weeks of a free trial at home was very frustrating. I know a lot of professors make one lab day be used for doing the assignment and getting questions answered. It was a pain to

get home try to work on it and get ahold of someone to answer questions, and then when the trial ran out you had to come all the way back to campus to do the homework. Again, no one around to help during these times. Also, I think if the Lab Write Up is still going to be a thing there should be more hands on practice with it throughout the semester. I know myself along with many other students felt like within the last two weeks of class right when every other class got crazy as well we were given this assignment we have never heard of. It was very stressful and the grading rubric was not much help at all for me. I didn't understand exactly what needed to be put into each part because we had never talked about it. I noticed on the last day of class there were results write ups in the end of the Lab Packets but those were never pointed out to us nor did we ever sit down and write one as a class until it was time to turn it in. I honestly didn't learn anything from the lab or lab write up. All I did was follow directions and try to muscle through it.

personally for me, the class moved too fast. I feel that for a basic statistics class there is too much material to be covered over the course of just one semester. it is also difficult to have so much to do with both the SPSS lab and the lecture portion of the class. i just feel its too much for one class in one semester.

I loved the class he and the gta's did anything and everything to help you to do good in the class. Their are plenty of office hours and they will help with anything you need explain material, homework, tests.

- Improvements: the time in the lab is rushed so its hard to sometimes to understand the concepts with such little time.

This class went more in-depth than i would like for it too, it sounds like a good problem, but it was too much information to cram into the semester. Way too many things due towards the end of the semester. But, I did learn a lot about the subject and how it is applicable to other things. Professor Bubb and his GTAs were very helpful.

When Dr. Bubb would have the GTA grade our material, we would get materials back several days later than promised. The syllabus is very long and extremely detailed. Many students found it confusing, but managed to pull off the homework and assignments by paying attention in class. Lab time is pointless in many ways.

I didn't find the lab to be educational in any way. It was more of a nuisance, especially since it was such a large class with one teacher and one assistant. The lab write up assignment was also pretty fuzzy as far as instructions go, which makes it difficult to properly write everything.

- great teacher, just a really hard class though

- Slow down a little when explaining so people have time to understand. I feel like a lot of the classes were rushed.

I liked how we were able to retake some of our module exams. I also liked how we got bonus points for attending the review days in class, and I liked the bonus points that were available throughout the semester. I think that the attendance policy was a good thing, but maybe look into allowing one absence per semester without penalizing, then take away points after that first unexcused absence.

- It was a very boring class.
- Assuming gets you in trouble"

Mr. Bubb was an awesome teacher! Really enjoyed learning in lectures even though i didn't necessarily enjoy the class as a whole. Thankful for attendance credit and remake tests. The paper was a little difficult just because I am not accustomed to writing about statistics and though we briefly touch on it in lab, I still didn't feel like I knew what I was exactly suppose to write about. Overall though, for a difficult class, a good experience.

Mr. Bubb was an overall great professor. He tried his best to keep the class interesting even though the subject was boring.

Let me tell you, I actually enjoyed this class. I didn't think I was going to because it is statistics, but Robb really made it great because he truly cared to take the time to teach us and help us learn everything we could this semester. The only thing I didn't like was SPSS lab, but I feel like that is a mutual feeling amongst most people. Thank you for a great semester!!

- Excellent class! Excellent teacher(s)! I really enjoyed this class and the challenge that it presented!
- Prof. Bubb is amazing!

I learned so many useful skills in this class. I never thought I would get much out of a STATS class, but I really did. I thought the test retake's were a great idea, not only for students doing poorly, but also to help some students get ahead. I would try to make the lab more effective if possible, because I did not feel very confident in my abilities of SPSS. I really felt like lecture days were extremely helpful and the entire class period was spent learning and no time was wasted. Overall, great class!

I thought Bubb was an excellent teacher however I was taking too many classes and did not have the time outside of class that I needed to spend on stats; therefore I will be gaping it. When I retake it I know I will have to set aside that time outside of class. I think Bubb is a fantastic teacher considering how challenging the material is. He is very encouraging and helpful

With the online tests, I wish there was other options for multiple choice rather than the concepts at the end.

- This way, when I am doing my calculations, I c have a way to verify my answers before I submit them to see if I need to check my math again
